EXCLUSIVE BOUTIQUE COLLECTION

Inspired by HRH Coco Accom

Discover the COVA collection.

24 product families. A concise guide to the biological pathways and potential applications behind each selection.

Retatrutide
Triple-receptor metabolic peptide; human trials evaluate weight management and glucose control.

Tirzepatide
Dual GIP/GLP-1 activity; clinical metabolic benefits relate to specific prescription formulations.

Semaglutide
GLP-1 activity associated with appetite and glucose regulation in clinical prescription-product studies.

Wolverine
BPC-157/TB-500 blend concept focused on tissue-response pathways. Confirm the written formulation.

GLOW
Multi-peptide blend concept. Potential applications depend on the confirmed components and amounts.

KLOW
Custom peptide blend concept. Request its exact formula and finished-product documentation.

CJC-1295 + Ipamorelin
GHRH-related and ghrelin-receptor signaling. Confirm CJC identity and DAC status.

Sermorelin
GHRH analogue studied for stimulation of growth-hormone release.

Tesamorelin
GHRH analogue; prescription use includes a specific HIV-associated lipodystrophy indication.

MOTS-c
Mitochondrial-derived peptide studied in metabolic adaptation and physical capacity, chiefly in preclinical models.

DSIP
Investigated in experimental sleep and neural-signaling studies.

AOD-9604
Modified growth-hormone fragment investigated in preclinical lipid-metabolism studies.

NAD+
Coenzyme central to cellular redox chemistry and energy-related enzyme activity.

GHK-Cu
Copper tripeptide studied in collagen, skin quality and extracellular-matrix biology, including topical studies.

BPC-157
Preclinical tendon and ligament studies examine repair, cell migration and tissue response.

TB-500
Thymosin-beta-4-related pathways: cell movement and tissue remodeling. Exact molecular identity matters.

KPV
Cell and mouse studies examine intestinal inflammatory signaling and epithelial transport.

Semax
ACTH-related peptide investigated in experimental neurotrophin and nervous-system signaling.

Selank
Tuftsin-related peptide investigated in neural and anxiety-related experimental pathways.

Epithalon
Tetrapeptide investigated in gene regulation and telomere biology in experimental models.

SS-31
Mitochondrial cardiolipin targeting; a distinct prescription product has a specific Barth syndrome indication.

Ipamorelin
Ghrelin-receptor agonist studied for growth-hormone release and endocrine signaling.

Thymosin Alpha-1
Thymalfasin; investigated in immune-cell signaling and specific clinical contexts.

PT-141
Bremelanotide; melanocortin signaling. A distinct prescription formulation has a specific female HSDD indication.

DOCUMENTATION & DESTINATION REVIEW

Request lot-matched identity, purity and content reports. Blend formulas, stock, shipping terms and destination requirements are confirmed in writing. Additional testing or certification claims require supporting records.

TAILOR MADE / Signature Edit • Boutique 35 • Private Collection

Boutique 35: $4,200 less 10% ($420) = $3,780 USD. Freight, duties and taxes quoted separately.
